

GSS MyDevice 1.0

Equip all your students with their “own” handheld at a fraction of the cost!

With GSS MyDevice, you’re able to turn a classroom set of devices into an unlimited supply of handhelds that are individualized for each student. It’s like giving students their very own handheld!

Every student equipped with a MyDevice card keeps a full copy of their handheld on the card. When they need a device to do their work, they pick up a handheld, insert their card and with a single tap, all their data, applications and settings are deployed to the device.

Students can then work with the device just like it was their very own personal handheld, make changes to their documents, add and delete applications, hotsync and beam.

When their work is done and they are ready to turn the device back in, they just reinsert their MyDevice card, tap save and their work, applications and settings are copied back to the card, ready and waiting for the next time they need them.

In addition, after their work is stored on the MyDevice card, the handheld is completely erased, ready and waiting for the next student.

Think of it as a way to equip all your students with their “own” handheld at a fraction of the cost!

The smart way to use your shared set of handhelds!

Benefits

- Even with a limited number of handhelds each student gets their very “own device”
- Extends your budget and brings technology to more students
- Simple to use allowing students to open and save their devices without teacher help
- After opening their device all settings and files are restored, its exactly the way they left it!
- Devices are fully configured after opening , you can be assured all the students have the applications they need
- Safer to share handhelds, because previous students personal work and files are erased

GSS MyDevice 1.0

Equip all your students with their “own” handheld at a fraction of the cost!

Recommendations

You should purchase a GSS MyDevice expansion card for each student using your shared handheld. At a minimum you need two GSS MyDevice cards for each shared device.

Need to configure handhelds quickly and easily? Then consider using *SD Deploy!*. It's the fastest way to clone handhelds. Many educators refer to *SD Deploy!* as *Ghost®* for the Palm.
